How to reset password from another device. What to do if you forget your d'link router password.

I use Ruby on Rails for my backend, with the minimum of personalized personalized Logic. To do this, go to Devision Initializer in Config / Initializers and search for config.mailer. Here I've changed to UserMailer: # Set the class responsible for sending e-mail. 77 78 79 # File à € " LIB / Devision / Models / Recoverable.RB ', LINE 77 DEF RESET_PASSWORD_PERIOD_VALID? To manually generate a password reset link using the DEVISE, the first step is to log in to your server and start the Rails console. One of the users of a type of SaaS that I take next door contacted saying that he could not redefine the password. Apparently, they did not receive the password redefinon email; It was not even in their spam folder. Returns the token sent in the e-mail. Recoverable takes care of resetting the user's password and sending rescue instructions. 50 51 52 53 54 55 # File à € " LIB / Devision / Models / Recoverable.RB ', LINE 50 DEF SEND_RESET_PASSWORD_INSTRUCTIONS_NOTIFICATION (TOKEN) TOKEN END I try Set Recoverise Password Link in My Layout View ... Setup. Mailer = à € e UserMailer 'Now try to send the e-mail again and à € ". Step 2: Creating Custom Mailer Create a new mailer. Returns true if passwords are valid and the registry was saved, false otherwise. Unless you have customized your routes, it will stay like this: raWFull credited for these steps for this stackoverflow response. Step 1: Send the password reset instruction to the user Press / Users / password with the following request to get the password reset email Provided by Devision Request Sample: à € œUserà €: à € à € à € œThe Reset Instructions will be simple and simple. reset_password_sent_at && reset_sent_at.utc> = self.reset_password_within.ago.utc end reset token ratresnoc ratresnoc somav ,arogA rop ahnes ed oEÀŠÅirtsnì eivne e ahnes ed oEÀŠÅinifeder So we can get our own personalized email with our own instructions. Right? You can access Reset_Token in your display with @Token as shown below. I try: = LINK_TO "to À À À À À À à € œà € " À À " Naturally, the authentication layer is treated by the device. The email design must be changed to what was provided by the designer. Then we must extend the mail device as shown Below: Class UserMailer
