

## THE DESKTOP DIGITAL MICROFILM SCANNER THAT DRAMATICALLY CHANGES THE IMAGE OF FILM SCANNING.

Start with a wide-screen microfilm scanner capable of handling everything from checks to blueprints to newspapers, and more. But make it compact enough to fit on any desktop. Then raise the bar by pushing output resolution up to 600 dpi. And design it for high-speed, simple operation, great versatility, easy connectivity, and fast throughput. While you're at it, make it affordable, too. Now, what do you call this perfect solution to your ever-expanding workgroup needs? Canon calls it the MS-800.

### Compatibility with virtually any film format.

Interchangeable film carriers enable the MS-800 to handle all types of microfilm applications. Compatible with 16mm/35mm open reels, 16mm cartridges, microfiche, and aperture cards, the MS-800 provides totally seamless support for every format.

### Productivity soars for even the busiest workgroups.

Overall performance gets a boost from the high-speed MS-800. Requiring only about three seconds per image to scan letter-sized documents at standard dpi settings, the MS-800 excels at high-volume processing and media conversion. Even its built-in features accelerate performance—Automatic Size Detection, Automatic Negative/Positive Detection, and Automatic Skew Correction—all designed to make short work out of complex jobs. For high-volume batch processing, the MS-800 shifts into high gear. When paired with Canon's FS Controller III, the MS-800 delivers super-fast, automated image retrieval.

### Quality right down to the smallest detail.

With up to 600-dpi resolution, the MS-800 sets new standards for image quality. Such high resolution offers a wide range of enhanced printing and distribution capabilities, including laser printing and electronic image transmission. Ideal for financial institutions, the MS-800 brings greater efficiency to item processing. And it's an expert at meeting the demands of engineering applications which require large-format printing. The MS-800 further refines image quality with multiple scanning modes (Fine, Photo, Grayscale), plus Background Erasure and Automatic Exposure. The result is enhanced image data for a variety of applications.
